

Assignment #03 – PS657

Spring 2025-26

Max Marks: 10

Date: 01-04-2026

There are many types of products that deal with cybersecurity for computing, data storage and communications devices and software. However the correct and secure operation of these devices require humans to follow certain processes like choose strong passwords, be alert to phishing messages and many other such things that may collectively be described as good cyber-hygiene.

Each group is required to discuss and develop a presentation covering the following three points

1. What sort of policies can a government make to inculcate good cyber-hygiene in the citizens?
2. How could we measure the effectiveness of these policies?
3. In the context of India, what would be the challenges in implementing these policies?

This presentation should be presented in class on Saturday 11th April 2026. Each group will have 20 minutes for presentation followed by 10 minutes for questions.
